

# D1. ENVRIplus Service Testbed based on EGI Cloud Compute

The attributes marked with a \* are confidential and should not be disclosed outside the service provider.

Service overview																									
Service name	ENVRIplus Service Testbed based on EGI Cloud Compute																								
Service area	Compute, storage																								
Service phase	Production: service available in the live environment meeting security/performance requirements																								
Service description	The provision of ENVRIplus service testbed corresponds to Reference Model Technology Viewpoint, that provide a real-world configuration to support testing and validation of ENVRIplus services																								
Customer group	<ul style="list-style-type: none"><li>• ENVRIplus RI research communities</li><li>• ENVRIplus individual researchers</li><li>• ENVRIplus Service Providers</li><li>• ENVRIplus related SME/Industry</li></ul>																								
User group																									
Value																									
Tagline																									
Features	<ul style="list-style-type: none"><li>• Execute compute- and data-intensive workloads (both batch and interactive)</li><li>• Host long-running services (e.g. web servers, databases or applications servers)</li><li>• Create disposable testing and development environments</li><li>• Configure Virtual Machines (VMs) according to requirements<ul style="list-style-type: none"><li>• Resources: CPU, memory, disk</li><li>• Application environments</li></ul></li><li>• Scale infrastructure and manage resources in a flexible way</li><li>• Integrated monitoring and accounting capabilities</li></ul>

Request workflow *	<p>The diagram illustrates the request workflow for the EGI Cloud Compute Service. It starts with three main groups: ENVRiplus Individual Researchers, ENVRiplus RIs, and ENVRiplus Service Providers. ENVRiplus Individual Researchers have a 'Need online applications' box, which leads to an 'Application on Demand Service' box. ENVRiplus RIs have a list of needs: 'Have Data/computing intensive solutions?', 'Need online/archive storage?', 'Need computing resources?', 'Need service hosting?', and 'Support distributed users?'. ENVRiplus Service Providers have a 'Need resources (testbed)' box. These needs are then processed through four interfaces: 'Web', 'API', and 'Command Line Interface', all of which lead to the 'EGI Cloud Compute Service (+ Container, HTC, Data and Storage services)'. The 'Application on Demand Service' also leads to the EGI Cloud Compute Service.</p>

[1] Technology Readiness Levels (TRL) are a method of estimating technology maturity of components during the acquisition process. For non-technical components, you can specify "n/a". For technical components, you can select them based on the following definition from the EC:

- **TRL 1** – basic principles observed
- **TRL 2** – technology concept formulated
- **TRL 3** – experimental proof of concept
- **TRL 4** – technology validated in lab
- **TRL 5** – technology validated in relevant environment (industrially relevant environment in the case of key enabling technologies)

- **TRL 6** – technology demonstrated in relevant environment (industrially relevant environment in the case of key enabling technologies)
- **TRL 7** – system prototype demonstration in operational environment
- **TRL 8** – system complete and qualified
- **TRL 9** – actual system proven in operational environment (competitive manufacturing in the case of key enabling technologies)
