

Participation to networks

Participation to projects can give visibility and enhance cooperation between different RIs and organizations. Participation to network activities requires resources thus RI needs to plan which projects and networks to participate and belong. For example, participating to Group of Earth observations (GEO) recalls for in-kind working hours.

Group of Earth observations (GEO) is a partnership of more than 100 national governments and in excess of 100 Participating Organizations that envisions a future where decisions and actions for the benefit of humankind are informed by coordinated, comprehensive and sustained Earth observations. GEO is a unique global network connecting government institutions, academic and research institutions, data providers, businesses, engineers, scientists and experts to create innovative solutions to global challenges at a time of exponential data growth, human development and climate change that transcend national and disciplinary boundaries. GEO can bring positive visibility to the RI and guide its actions towards supporting Paris agreement. RI can learn from other GEO partners, get new contacts and deepen collaboration with different organizations. GEO Week is one potential conference for RI to participate by joining side-event or booth organizing.
