

Access to Research Infrastructures

What is Access to Research Infrastructures Theme?

The ultimate success of Research Infrastructure is measured by the research that is carried out based on the data, software services, ICT and technical resources and user expertise that the Research Infrastructure offers. The access to Research Infrastructure across disciplines and the flexible response to the evolving needs of the scientific community are key factors for sustainability of Research Infrastructures. Hence offering seamless access to a broad multidisciplinary community is a common goal of the environmental Research Infrastructures.

Both, cost efficiency and scientific return of Research Infrastructures are enhanced by multiple-purpose use and use across disciplines, as well as by joint use with other institutions or projects. Enhanced capacities for remote access on “demand” and for remote observation campaigns enable Research Infrastructures to reach a broader community.
