

T8.8 Disaster Mitigation Competence Centre Plus (DMCC+)

This page is Public

About

DMCC+ will establish a regional collaboration platform of disaster mitigation by using numerical simulation and data management services. DMCC+ will:

- Develop simulation models and scientific gateways to support workflows for hazard analysis.
- Make existing regional e-Infrastructure compatible with EOSC framework, and expand those based on the latest technologies.
- Make data, online services and derived science results available in EOSC.
- Reach out to and support the user base in Asia and in partnership with EOSC-hub in Europe.
