

Cataloguing in SIOS

Context of cataloguing in SIOS

Summary of SIOS requirements for cataloguing

Detailed requirements

1. Do you use catalogues or require using catalogues for the following items?

- Observation system
- Data processing system
- Observation event and collected sample
- Data processing event
- Data product
- Paper or report product
- Research objects or feature interest (e.g. site, taxa, ...)

[it is planned to use catalog]

2. For each used or required catalogue, consider the following questions:

i. Item descriptions:

- Which fields do you use for describing items? [alfanumerical]
- Which standards do you apply for these fields (format or standard model)? [ISO19115]
- Do you use controlled vocabularies for these fields? If so, please cite the vocabulary service providers. [can't answer]
- Do you maintain a cross-link or inter-links between:

Catalogue items (e.g. between observation system - observation event - result dataset)? [can't answer]

Fields for item description and actual items (e.g. between dataset fields - dataset access services or between sample fields - label on the sample)? [can't answer]

- Which repositories/software do you use to manage your metadata? [interoperable local repository]

ii. Inputs:

- **Human inputs:** Do you provide/need facilities for editors/reviewers to maintain the metadata in the catalogues (e.g. forms, validation workflow, etc.)? If so, please describe them briefly. [can't answer]
- **Machine inputs:** Do you use/ need automated harvesting to populate your catalogues? If so, which protocol do you use (e.g. csw, oai-pmh, other, specific)? [can't answer]
- How do you manage duplicates? i.e. Do you apply governance rules in a network of catalogues, do you use unique identifiers, or take other actions? [can't answer]

iii. Human outputs:

- What specific feature is provided/required in your web discovery function (multi-criteria search, graphical selection components (e.g. map, calendar), facets, keyword or natural language)? [multicriteria, keywords, map ,calendar]
- Do you evaluate the accessibility, quality, and usage of your catalogue by using a dashboard or value-added products? If so, do you provide/need:

- o Popularity or Usage feedback?
- o Any other synthesis, indicators or statistics?

If so, please describe them shortly.

[can't answer]

- Is the catalogue freely readable or do you apply a specific authorization scheme? If you are applying a specific authorization scheme, please cite the authentication system (SSO) and the authorization rules. [can't answer]

iv. Machine outputs:

- Do you provide/need machine interfaces for accessing your catalogues? If so, which protocols are implemented?

[can't answer]

- Do you need to fit in Applicable Regulations requirements (e.g. INSPIRE) or embedding frameworks (GEOSS, OBIS)? If so, please cite the regulation, applicable interface requirements, impacts (format, performance, access policy, etc.) on your catalogues.

[can't answer]

Formalities (who & when)

Go-between	Yin Chen
RI representative	Jon Borre Orbek, Angelo Viola, Vito Vitale
Period of requirements collection	Aug 2015- Jan 2016
Status	completed
