

# IMG

Following up to the "Coordination of infrastructure management" session at the EGI Conference 2020, a new **Infrastructure Management Group (IMG)** group has been created, with the main task of coordinating the expertise and collecting the code and the documentation distributed among all the experts at EGI sites about configuring the middleware. The final objective is to collect, improve, document and propose a complete set of playbooks to minimize work duplication at the sites, providing each other quality configuration code to be used by the community of the EGI site administrators and greatly facilitating the deployment of new sites and services.
